EXPERIENCE

RD4 Consulting, Senior Software Consultant

4/2024 - Present

Raytheon Windchill PLM Project

- Designed government-compliant, Java Spring Boot based PDF converting/merging solution to replace Adobe product and save \$600k in yearly license costs, and managed three developers to deliver within tight time constraints
- Enabled clients in closed network labs to upgrade to latest Raytheon PDM version, after multi-year delays, by replacing brittle, manual build steps with reproducible, deterministic installers
- Consolidated previously scattered data into a single unified view with efficient queries improving data accessibility for users and eliminating the need to search across multiple pages
- Simplified customer contract workflow by removing manual confirmation steps and automating related data updates, removing the dependency on a customer role in the workflow team
- Refactored date logic for contract-driven data packages to support timezones for Raytheon UK release
- Increased reliability of Selenium based autotests to drastically reduce reliance on manual regression tests and save QA/PM hundreds of hours per release cycle
- Added ability for users to save/share custom package structure filters, reducing user error and setup time

Carimus, Full Stack Software Engineer

3/2021 - 4/2024

Raytheon Windchill PLM Project

- Wrote data validation scripts and collaborated with Windchill vendor to test internal data replication tool for transferring large structures of objects and dependencies between closed network labs
- Integrated existing engineering workflows with Cognos report generation system allowing users to see workflow metadata, action history, and associated files all in once place
- Innovated in-app admin data generation tool for bulk creating objects in different states to greatly reduce setup time during code reviews

MiLuma - Puerto Rico's Energy Portal

- Built dockerized email/sms Java Spring Boot microservices to support 2FA and enable communication between users and support representatives via forms
- Created login/sign-up flow, integrating with account, JWT based authentication services
- Designed reusable form system, enabling customers to easily submit billing, outage, and account update requests directly through the web app
- Implemented comprehensive customer activity metrics and monitoring in Datadog, replacing manual debugging and enabling faster issue detection

Contract AI - contract simplification service

- Developed TS/React components for headless wordpress implementation for site makeover
- Designed GraphQL queries to transform user data from CMS into full page layouts

Joulebug - Large-scale gamified ESG application

- Implemented localization across components in React Native app
- Created analytics web dashboard allowing admin users to track statistics and generate engagement and challenge summary reports for thousands of users

Prometheus Group, Support Engineer

10/2020 - 3/2021

- Added an organized, filterable FAQ page to Customer Portal to provide customers with access to knowledge base articles queried from TeamSupport, reducing support load/tickets
- Integrated TeamSupport ticket creation with Customer Portal to replace manual email method, with automatic ticket creation and confirmation, removing support overhead

TECHNICAL SKILLS

Languages: Typescript, Java, Python, SQL, **Frameworks/Systems:** React/Native, NextJS, Spring Boot, AWS, Vercel, PostgreSQL, OracleDB, Kafka, Docker, Jenkins

EDUCATION

COLGATE UNIVERSITY, Hamilton, NY

5/2020

- Major: Computer Science; Minors: Physics, German
